

COPILOT

Capabilities Statement

We do work that matters.

COPILOT is a Service Disabled Veteran Owned Small Business (SDVOSB) founded by a Navy IT Veteran on a mission to improve the way Americans experience digital interactions with our government. Our cross-functional teams employ human-centered design practices, agile delivery methodologies, cutting edge software development, cybersecurity best practices, cloud-operations optimization, and DevOps automation that deliver best-in-class products to serve our country.

Here is what all of that really means: We do things like make it easier for Veterans to access the benefits and services they've earned, help clinicians take better care of their patients by offering real-time access to tools and data that enhance treatment plans, and safeguard government systems from malicious spyware and cyber attacks.

SERVICES
